The present sequence encodes a maize cellulose synthase polypeptide. The cellulose synthase can be used for the improvement of stalk quality for improved stand or silage. It also provides an increased concentration of cellulose in the pericarp, hardening the kernel and improving its handling ability. The sequences are used to produce transgenic plants and seeds expressing the cellulose synthase. The polynucleotide is used for modulating, preferably increasing, the level of the synthase in a plant cell. The plants are preferably monocots. The polynucleotide is salso used as a probe or primer in the detection quantitation or isolation of gene transcripts. deficiencies in the level of mRNA in screenings for desired transgenic plant, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic variants of the gene, or for use as molecular markers in plant breeding programs. The isolated nucleic acids of the present invention can also be used for recombinant expression of their encoded polypeptides or for use as immunogens in the preparation and/or screening of antibodies. The proteins can be employed in assays for enzyme agonists or antagonists of enzyme function or for use of immunogens or antigens to obtain antibodies specifically immunoreactive with a protein.

Pinus radiata cellulose synthase nucleotide sequence SEQ ID NO:69

Page

```
The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences producing an Expectation (E) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them. 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are proteins encoded by some of the polynucleotide sequence given in the present invention.
                                                                                                                                                                                                                                                                                 New genes encoding proteins involved in a plant polysaccharide blosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3851 BP; 1040 A; 796 C; 944 G; 1071 T; 0 other;

The present sequence encodes a maize cellulose synthase polypeptide.
The cellulose synthase can be used for the improvement of stalk quality
for improved stand or sliage. It also provides an increased concentration
of cellulose in the pericarp, hardening the kernel and improving its
handling ability. The sequences are used to produce transgenic plants
and seeds expressing the cellulose synthase. The polymuleotide is
used for modulating, preferably increasing, the level of the synthase
in a plant cell. The plants are preferably monocots. The polymucleotide
is also used as a probe or primer in the detection quantitation or
isolation of gene transcripts. The probes are useful in detecting
deficiencies in the level of mRNA in screenings for desired transgenic
plant, for detecting mutations in the gene, for monitoring upregulation
of expression or changes in enzyme activity in screening assays of
compounds, for detection of any number of alielic variants of the gene,
or for use as molecular markers in plant breeding programs. The New genes which encode maize cellulose synthase polypeptides in plants useful for modulating the expression of cellulose synthase in plants and to produce transgenic plants expressing the novel protein isolated nucleic acids of the present invention can also be used for recombinant expression of their encoded polypeptides or for use as immunogens in the preparation and/or screening of antibodies. The proteins can be employed in assays for enzyme agonists or antagonists of enzyme function or for use of immunogens or antigens to obtain antibodies specifically immunoreactive with a protein. plants for modulating the expression of cellulose synthase in produce transgenic plants expressing the novel protein and to

Claim 1; Page 184-188; 119pp; English

The present sequence encodes a maize cellulose synthase polypeptide.

The cellulose synthase can be used for the improvement of stalk quality

Comproved stand or silage. It also provides an increased concentration

of cellulose in the perioarp, hardening the kernel and improving its

nandling ability. The sequences are used to produce transgenic plants

compared for modulating, preferably increasing, the polynucleotide is

consed for modulating, preferably increasing, the level of the synthase

consed for modulating, preferably increasing, the level of the synthase

consed for modulating are preferably monocots. The polynucleotide

consediction of an a probe or primer in the detection quantitation or

colation of gene transcripts. The probes are useful in detecting

deficiencies in the level of mRNA in screenings for desired transgenic

colation of gene transcripts. The probes are useful in detecting

confection of gene transcripts. The probes are useful in detecting

confection or changes in enzyme activity in screening assays of

compounds, for detection of any number of allelic variants of the gene,

compounds, for detection of any number of allelic variants of the gene,

confection or changes in enzyme activity in screening assays of

confections an obtending of the present invention can also be used for

recombinant expression of their encoded polypeptides or for use as

confections can be employed in assays for enzyme agonists or antagonists

confections can be employed in assays for enzyme agonists or obtain

confections are also antagonists or solution of confective with a protein.

Claim 1;

```
The present sequence encodes a maize cellulose synthase polypeptide.

The cellulose synthase can be used for the improvement of stalk quality for improved stand or silage. It also provides an increased concentration of cellulose in the pericarp, hardening the kernel and improving its handling ability. The sequences are used to produce transgenic plants and seedse expressing the cellulose synthase. The polywouclectide is used for modulating, preferably increasing, the level of the synthase in a plant cell. The plants are preferably monocots. The polywouclectide is used for modulating, preferably increasing, the level of the synthase in a plant cell. The plants are preferably monocots. The polymouclectide is also used as a probe or primer in the detection quantitation or isolation of gene transcripts. The probes are useful in detecting deficiencies in the level of mRNA in screenings for desired transgenic deficiencies in the level of mRNA in screening for desired transgenic of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic variants of the gene, for use as molecular markers in plant breeding programs. The isolated nucleic acids of the present invention can also be used for recombinant expression of their encoded polypeptides or for use as immunogens in the preparation and/or screening of antibodies. The proteins can be employed in assays for enzyme agonists or antagonists of enzyme function or for use of immunogens or antigens to obtain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  412

/note="Vector: Lambda Uni-ZAP XR, excised phagemid;
Site_1: ECORI; Site_2: Xhoi; One-month old plants were
subjected to vernalization treatment by placing them in
the cold room at 6. under 15hr light/9hr dark condition.
Total RNA was prepared from apex tissue extracted from
plants with no cold treatment; and from plants with 2-week
/ 4-week and 6-week cold treatment separately. Equul
amount of total RNA was pooled from all four samples, a
cDNA library was made using pooled polyA RNA and cDNA
clones were in vivo excised at the University of
California, Davis (V. Echenique, B. Stamova, J. Dubcovsky
). Plasmid DNA preparations and DNA sequencing were
performed in the Ob Anderson lab (all other authors)."

crystallization dishes. Five-day old seedlings were incubated at 50c for 2 days. Shoots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 600000 pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University and Wing). Plasmid DNA preparations balmer, Frisch, Atkins and Wing). Plasmid DNA preparations, UNI sequence and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or
